

4.6

Speech box device

The speech box device is a development of the square shape used in the University logotype.

The speech box device can be used for Town House Strategy outputs.

The speech box device can be also be used in Kingston University outputs where the University is 'in conversation' with internal or external audiences. Typical scenarios include the Our Values toolkit where the University is explaining the Values Framework to its staff, or a quotation where a person is talking directly to the audience.

The addition of a 'tail' transforms the square into a container for speech, images, layouts and ideas and it also gives it dynamism and direction as the tail can face left or right. The tail should always be on the bottom of the box.

In this way the speech box describes the social, collaborative, proactive character of the University.

The speech box can be coloured and it can be rendered as a solid, a tint or graduated tint or an outline. If the speech box is rendered as an outline the width of the line must be consistent throughout the shape.

The purpose of the speech box device is flexible. It can be used to contain images or text including quotations. It can also be used, as a means of expressing the relationship between the University and other entities.
