

4.7

Square fade device

The square fade device is a development of the square shape used in the University logotype. It can be used to transition one image to another, or as a pattern.

Square fade device used in hoarding to transition one image to another

Square fade device used as a pattern.

If used with photography the square fade device may use colours originating within the photographic images. Hang elements or text from the horizontal and vertical lines of the square fade device

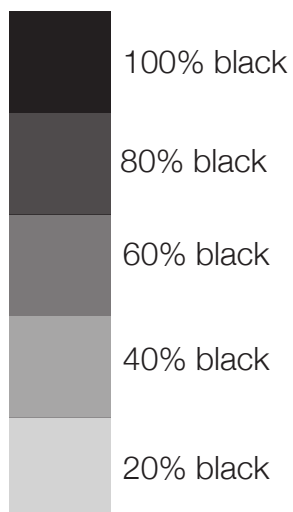

Section 4.7 - Square fade device

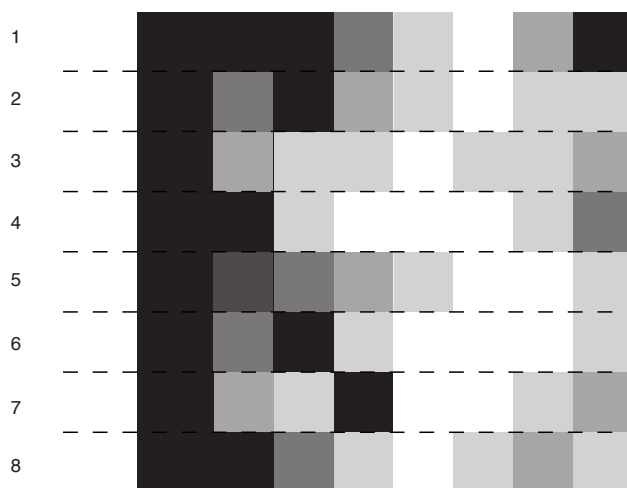

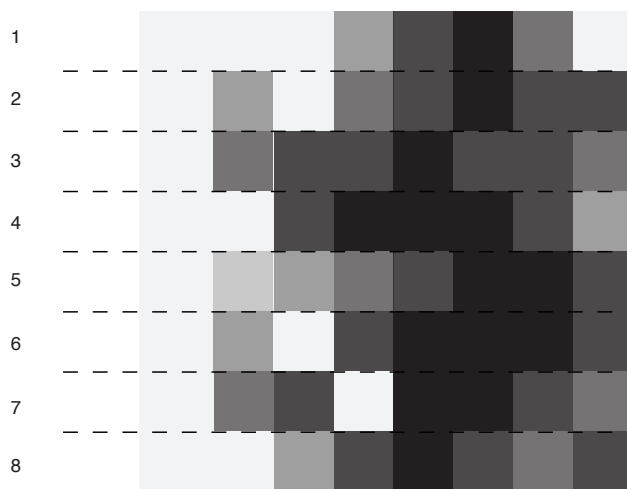

Brand Guidance

V.1 March 2025

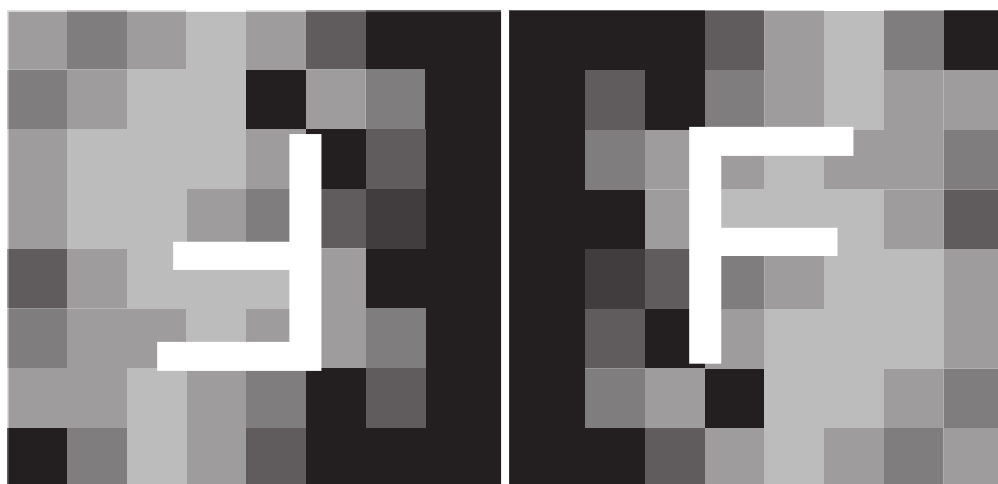

The square fade device grid pattern is 8 squares high x 7 squares wide. The colour has a range of tints between 100% - 0%.

The tint colours apply to any of the secondary brand colours.

Two square fade blocks can be flipped and joined together to transition a solid colour or image.

Position the Kingston University logotype from the horizontal and vertical lines of the square fade device or hang from the top margin.
